ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

AB Disclosed is a composition for forming a hydrophilic coating includes an organic binder having an average particle size from about 1 to about 100 nm and an inorg. binder having an average particle size from about 1 to about 40 nm. The composition further includes an inorg. photocatalyst that catalyzes an oxidation-reduction reaction.

DT Journal

LA English

AB A simple method for preparation of Pd catalysts supported on low-surface-area inorg. powders as carbons, oxides (SiO2, diatomites, WO3, Ta2O5, Nb2O5, V2O5, TiO2, CeO2, ZrO2, Ga2O3, In2O3, Cr2O3, Fe2O3, Al2O3) and salts (CaF2, BaSO4, Ca3(PO4)2) was developed. It implies hydrolytic deposition of Pd(II) precursors onto a support in basic solns. Regularities of the hydrolysis process without and in the presence of the support are studied by various physicochem. methods. A scheme of the formation of catalytically active component was put forward. Reduced with H2 at 50-120 °C, the palladium catalysts
